

Visualization Exploration & Data Analysis

Brian Freitag, PhD
NASA MSFC

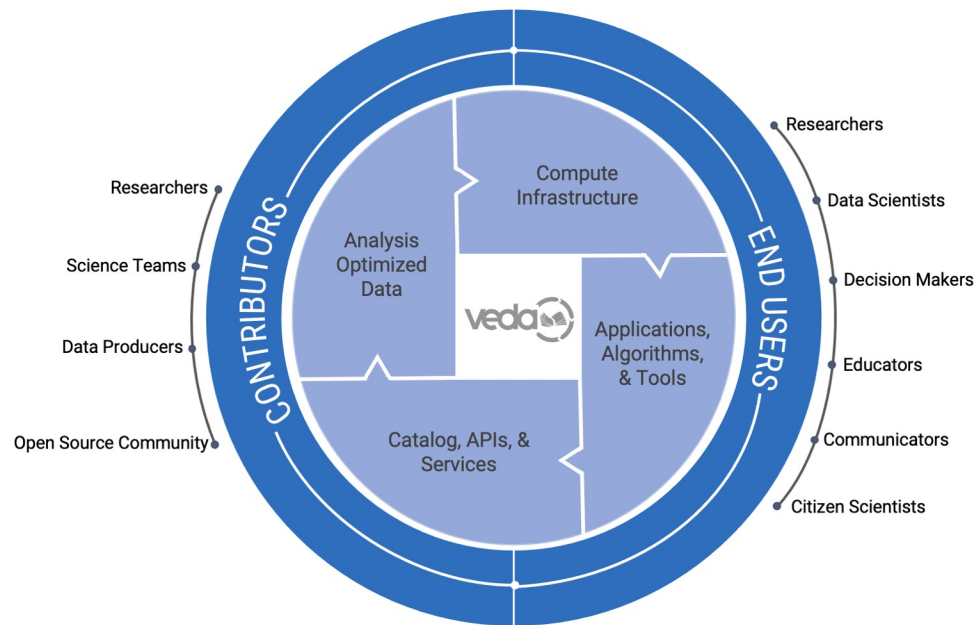

Visualization, Exploration, and Data Analysis

Why?

- Interdisciplinary science depends on large amount of Earth science data and computational resources
- Working with these datasets is non-trivial
- Big data science requires advanced distributed computing knowledge

What?

VEDA is an open platform that brings key Earth science datasets next to open source tools for data processing, analysis, visualization, and exploration in a managed and more accessible computing environment

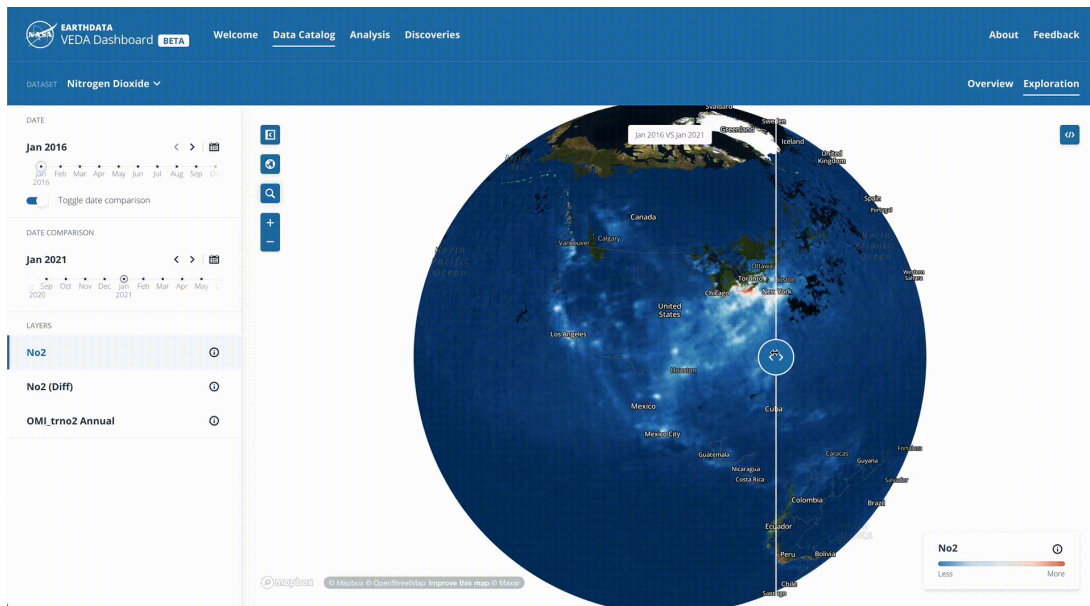

Explore

Analyze

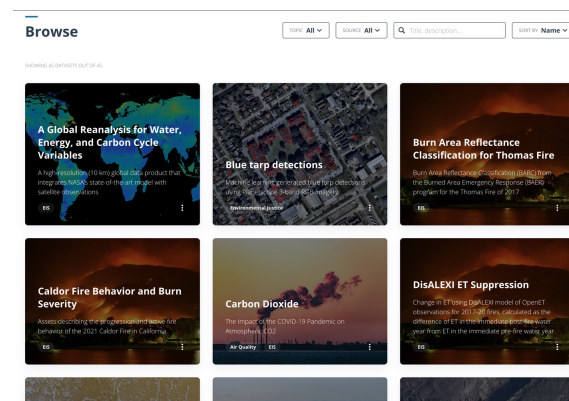

Publish

Communicate

Finding relevant data products

Exploring data to identify interesting features

```
[9]: fig, ax = plt.subplots(1,2,figsize=(11,5))  
  
# visualize burn area values for all fires  
ax[0].hist(gdf['area'].values, bins=300)  
ax[0].set_xlabel(200)  
ax[0].set_ylabel('log')  
ax[0].set_xlabel('Fire Area (km2)')  
ax[0].set_ylabel('Count')  
  
# plot only sample of fires because  
# all of them will take a while to render  
coms.plot(ax=ax[1], edgecolor='black', color='name')  
gdf.sample(10000).plot(ax=ax[1], edgecolor='red', color='red')  
ax[1].set_xlabel('Longitude')  
ax[1].set_ylabel('Latitude')  
fig.show()  
  
[10]: # isolate large fires >= 5km2  
large_fires = gdf[gdf['area'] >= 5]  
print('# of large fires', len(large_fires))  
# of large fires: 1744  
  
[11]: # optional interactive visualization  
# timestamps must be dropped because they don't play  
# well with the interactive map  
# large_fires.drop(['StartTime', 'EndTime'], axis=1).explore(column='fid', style='muted', fill=False,  
# title='Stamen Terrain', cmap='jet')  
  
[12]: base_path = 's3://veda-data-store-staging'  
fire_ids = set()  
file_paths = []  
  
# str = 'FL'  
# nfp_str = 'NFP'  
  
for obj in veda.objects.filter(Prefix='EIS/other/fds-output/2022/LargeFire'):  
    file_path = os.path.join(base_path, obj.key)  
  
    if f_str in file_path or nfp_str in file_path:  
        # pass  
        continue  
  
    file_name = file_path.split('/')[-1]  
    fire_id = file_name.split('_')[0]  
  
    fire_ids.add(fire_id)  
    file_paths.append(file_path)  
  
fire_ids = list(fire_ids) # convert to list for indexing
```

Developing advanced data products and analysis

Carrying out calculations "in place" without the need to download data

Dynamically allocating resources for computationally demanding processing

Explore

Analyze

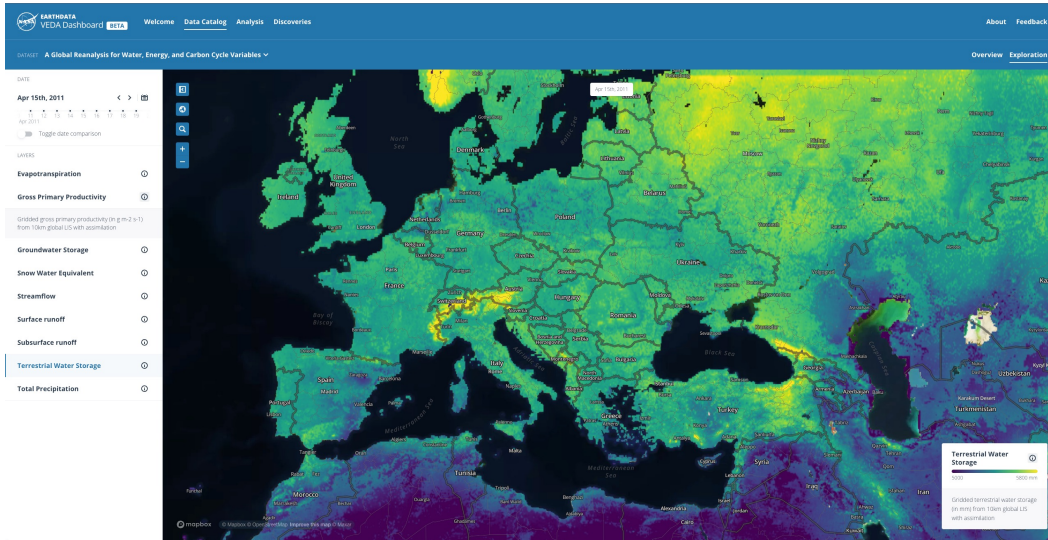

Publish

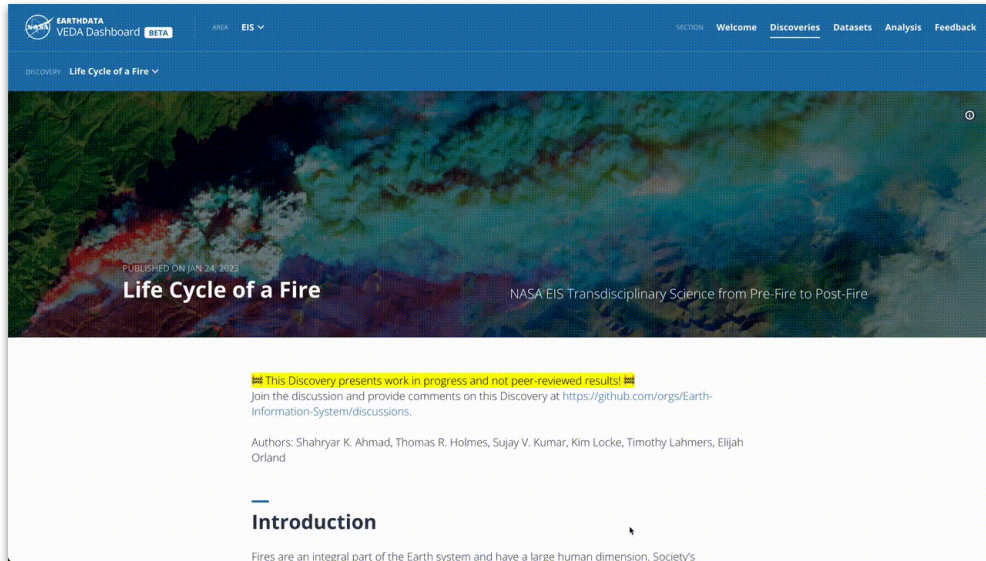

Communicate

Conveniently delivering data through existing interfaces

Providing automatic access to interactive visualization capabilities

Allowing users to analyze your products within the environment

The screenshot displays the NASA EarthData VEDA Dashboard interface. At the top, there is a navigation bar with the NASA logo, 'EARTHDATA VEDA Dashboard BETA', and a dropdown menu for 'AREA EIS'. The main navigation includes 'SECTION', 'Welcome', 'Discoveries', 'Datasets', 'Analysis', and 'Feedback'. Below the navigation, the current discovery is titled 'Life Cycle of a Fire'. The main content area features a large, colorful satellite-style image of a landscape with a fire. Text on the image includes 'PUBLISHED ON JAN 24, 2023', 'Life Cycle of a Fire', and 'NASA EIS Transdisciplinary Science from Pre-Fire to Post-Fire'. Below the image, a yellow warning box states: '⚠️ This Discovery presents work in progress and not peer-reviewed results! ⚠️'. Below the warning, it says: 'Join the discussion and provide comments on this Discovery at <https://github.com/orgs/Earth-Information-System/discussions>'. The authors listed are: 'Authors: Shahryar K. Ahmad, Thomas R. Holmes, Sujay V. Kumar, Kim Locke, Timothy Lahmers, Elijah Orland'. The section 'Introduction' is partially visible, starting with the text: 'Fires are an integral part of the Earth system and have a large human dimension. Society's

User friendly data-driven storytelling

Enrich science and applications narratives with interactive exploration

How to use it?
